---

This directory contains the first version of the newly factorized version of DOLCE-Lite-Plus. A thorough description of the library is contained in the comment to "DLP" module, which imports from all other modules. In order to load the ontologies locally, you need to change the import pathname in order to reflect the position of the files in your own directories.

For example, the current import pathname of DO+DnS in the files that use that module is:

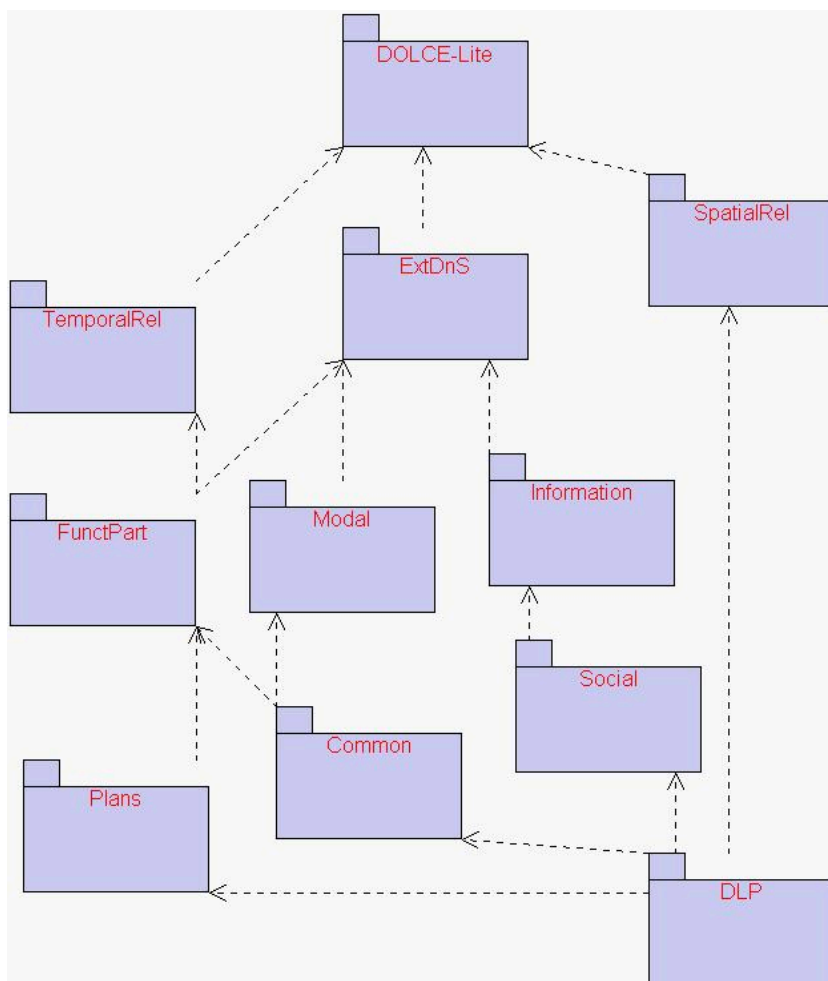

```
<owl:imports rdf:resource="http://www.loa-cnr.it/Files/DLPOns/DO+DnS_397.owl"/>
```

You should change it as follows:

```
<owl:imports rdf:resource="file:/YOURDIR1/YOURDIR2/YOURDIRn/DO+DnS_397.owl"/>
```

Alternatively, you can add an alias if your editor allows for it.

Currently, the module hierarchy (for version 397) is as follows:

The current state (for 397) of the DLP library is:

DL Expressivity (for the complete library): SHION(D) [within OWL-DL]

S == ALCR+

AL - Attribute Logic: Conjunction, Universal Value Restriction, Limited Existential Quantification

C - Complement (together with AL allows Disjunction, Full Existential Quantification)

R+ - Role Transitivity

H - Role Hierarchy

I - Role Inverse

O - Nominal

N - Unqualified Number Restrictions

(D) - Datatypes

Total Number of Classes: 205

Total Number of Datatype Properties: 4

Total Number of Object Properties: 311

Total Number of Annotation Properties: 2

Total Number of Individuals: 39
